**TITLE:** NOTICE TO OFFERORS - FLIGHT SAFETY PARTS REQUIRING ENGINEERING TESTING (USAAMCOM)

**TEXT**

(a) The parts being procured under this solicitation are identified as flight safety parts requiring engineering testing. In accordance with the Army policy pertaining to such parts, this procurement is limited to only those sources (1) who have been approved in accordance with AMCOM (previously ATCOM) source approval procedures and (2) whose part has successfully completed all required engineering testing. Notwithstanding the fact that the technical data package may list sources who have not been tested, only those sources listed in Section B are eligible for award.

(b) By submitting an offer/bid/quote, the contractor certifies that (1) parts representative of the parts it will deliver have previously been subjected to and have passed all requisite engineering testing and (2) the critical manufacturing processes that will be used to produce the parts are either unchanged since the representative parts were tested or that changes in critical manufacturing processes have been approved by the Government in accordance with QE-STD-1 or other Government approved standard. The contractor agrees to provide any and all pertinent documentation which the Government deems necessary to show compliance with the foregoing requirements.

(End of Clause)
